Game Theory and Industrial Organization Syllabus

University of Florida

Fall 2019

Instructor: Germán Bet Email: cgerman.bet@ufl.edu

Course location: Room MAT 3

Course time: Mondays-Wednesdays 9:35AM-11:30AM (Periods 3 & 4)

Office: 321 Matherly Hall

Office Hours: Mondays 3:30PM-4:50PM; and by appointment

TA: Jieun Kim

Email: jeam5123@ufl.edu Office: 301A Matherly Hall

Office Hours: Tuesdays 4PM-6PM

Course Description:

Noncooperative game theory is the analytic framework used to formally analyze strategic interaction, which occurs when each player's actions affect the other players' well-being, and relationships are of the rivalrous nature. The course combines theoretical models with some applications of game theory to industrial organization. Industrial

organization is the branch of Microeconomics that is concerned with the study of imperfect competition (i.e., functioning of markets with few competitors). The presence of a small number of competitors creates situations of strategic interactions among the market participants. The course will consider the analysis of game theoretic methods to study oligopolistic firm behavior in a variety of scenarios, ranging from simple forms of static competition to complex dynamic games involving strategic behavior. We will also study applications such as entry deterrence, predatory conduct, different modes of non-price competition (such as Research and Development), or auctions.

Textbook and Readings:

There are no required textbooks for this course. Some recommended textbooks in Game Theory are:

- Game Theory for Applied Economists, by Robert Gibbons.
- Games, Strategies, and Decision Making, by Joseph E. Harrington, Jr.
- Game Theory, by Drew Fudenberg and Jean Tirole.
- The Art of Strategy: A Game Theorist's Guide to Success in Business and Life, by Avinash K. Dixit and Barry J. Nalebuff

A recommended textbook in Industrial Organization is Pepall, Richards and Norman, *Industrial Organization: Contemporary Theory and Applications*, 2014, Fifth Edition.

Evaluation and Grading:

Evaluation will be based on problem sets (10% of the total grade), class participation (10%), and two midterm examinations. The first midterm examination (40% of the total grade) will be held in class on Wednesday October 9. The last exam (40% of the total grade) will be held the last day of class, on Wednesday December 4.

The course is divided into two parts, each followed by an exam that focuses mostly on the current part. Make-up exams will be administered only on those circumstances in which you cannot take an exam for a valid reason, such as illness or emergency (see UF policy on this). In that case, you should notify me prior to the start of the examination. A zero exam score will be assigned if you miss an exam for an

unexcused reason. Please also note that providing false documentation or creating an excuse to be excused from class that cannot be verified constitutes cheating under the University guidelines. UF policy on academic honesty will be strongly enforced.

There will be at least 6 problem sets. Due dates for the assignments will be announced in class. All assignments are due in class before the class starts on the due date. Late submissions will not be accepted and will receive zero credit. Your lowest problem set grade will be dropped.

Class participation (i.e., asking and answering questions in class) accounts for 10% of the total grade. I will keep track of who comes to class and participates in class starting the second day of classes (once the roster is fixed). Your class participation grade will be determined based on a curve.

Your final letter grade will be determined based on a curve at the end of the semester. The distribution of the grades will depend on the overall performance of the class.

Academic Honesty

You are expected to comply with the University of Florida's rules for academic honesty (which can be found here). Failure to comply with this commitment will result in disciplinary action.

Students with Disabilities

Students with disabilities requesting classroom accommodation must first register with the Disability Resource Center. The Disability Resource Center will provide documentation to the student who must then provide this documentation to the instructor when requesting accommodation. Students with disabilities should follow this procedure as early as possible in the semester.

Topics

The following is a list of broad topics that we will be studying in this course. We will cover different applications of game theory to industrial organization within each of them.

- 1- Introduction to Game Theory
- 2- Static Games of Complete Information
- 3- Dynamic Games of Complete Information
- 4- Static Games of Incomplete Information
- 5- Dynamic Games of Incomplete Information
