Welfare Economics and the Second Best

This is the first half-semester mod in the sequence on the economics of the public sector. This course covers several topics in optimal taxation. A second mod in the spring semester will cover other topics in optimal tax theory. The focus is to prepare you to do research in public economics.

Requirements

Problem sets: They are important for learning the material, but do not count heavily toward your grade. Some problem sets extend a lecture presentation, while others include detailed examples. You may discuss these problems with other students, but you must turn in your own answers. Unless stated otherwise, they must be handed in for grading.

Exam: There is one exam for the course which will largely determine your grade. The exam will be on (or due on) Monday October 14.
